

## Mesh communication behind EOX: CARDO SYSTEMS

Cardo Systems, the global market leader in wireless communication systems for powersports, has announced a new partnership with leading helmet brand Ruroc, collaborating with the British-born manufacturer to bring a new choice of total integrated connectivity to the brand's latest flagship helmet - EOX.

Fully integrated and involved throughout the entire research and development process, Cardo Systems has worked closely with the Ruroc team to bring their very latest technology to the all-new EOX, delivering a feature-rich mesh communications system to Ruroc riders for the first time.

Using Cardo's leading DMC (Dynamic Mesh Communications) technology, the new Shockwave Mesh powered by Cardo System supports group rides of up to 15 riders, at a range of up to 1.6km (1 mile). Thanks to Cardo's decades of experience in motorcycle communications, the new Shockwave Mesh system boasts an IP67 Waterproof rating and features Natural Voice Operation, enabling riders to simply use voice commands, with over-the-air updates too.

Offering super high-quality audio thanks to the adoption of Harman Kardon speakers, the Shockwave Mesh will even adapt to your surroundings with its auto-volume feature; whether you need to crank up the volume to soundtrack those twisties or dial down the group chat to hear yourself think, the Shockwave Mesh adaptive sound will do the work for you.

Key features of the Shockwave Mesh by Cardo include:

- **Group Communication:** With Cardo Communication System, riders can stay connected with up to 15 riders within a range of up to 1 mile (1.6 kilometres) through mesh connectivity or connect via Bluetooth® for music, phone, or map capabilities.
- **Superior Audio Quality:** The integrated Cardo Communication System ensures crystal-clear sound, with punchy 40mm speakers, tuned by the audio experts at Harman Kardon
- **Voice Command and Hands-Free Operation:** Riders can keep their hands on the handlebars and their focus on the road, as the new EOX supports voice commands for seamless operation, making communication effortless and intuitive.

### About Cardo Systems

Cardo Systems provides cutting-edge communication devices and application services for powersports and outdoor enthusiasts. Cardo's devices and services promote riders' safety and enable motorcycle riders, off-road drivers, and adventure seekers to stay connected to their phone, music, and to each other. Cardo launched the world's first motorcycle Bluetooth-based wireless intercom headset in 2004 and has been responsible for most of the industry's innovations ever since. This includes the introduction of the first mesh-powered intercom, the first premium sound and the first voice-powered device, to

name but a few. Cardo's products are sold in over 100 countries and are the world's leading communication devices for groups in motion.
